The first of these is the fact that the
 system is not a simple one, but a
 complex one, involving many factors
 which are not yet fully understood.
 The second is that the system is not
 a static one, but a dynamic one,
 which is constantly changing and
 evolving. The third is that the
 system is not a closed one, but an
 open one, which is constantly
 interacting with the environment.
 The fourth is that the system is not
 a linear one, but a non-linear one,
 which is characterized by feedback
 loops and other non-linearities.
 The fifth is that the system is not
 a deterministic one, but a stochastic
 one, which is characterized by
 random fluctuations and noise.
 The sixth is that the system is not
 a simple one, but a complex one,
 which is characterized by many
 interacting components and a
 high degree of complexity.
